

The Ohio Department of Medicaid (ODM) is Changing Trading Partner Electronic Data Interface (EDI) Vendors

Please share the information in this notice with appropriate staff at your organization, especially if your agency is your own trading partner with Ohio Medicaid. If you are not your own trading partner, please check with your EDI vendor about their status of testing with the new ODM EDI vendor.

The Ohio Department of Medicaid (ODM) is transitioning from the Ohio Department of Administrative Services (DAS) to Hewlett Packard Enterprises (HPE) for their trading partner EDI process. Opportunities for current Ohio Medicaid trading partners to begin testing the new EDI process with HPE began in June of 2016. ODM has been in direct contact with trading partners since June 2016, including notifying them when they are being moved to open beta testing. If you are your own trading partner with ODM, you should contact the appropriate individuals within your organization to verify testing status. If you are not your own trading partner with ODM and send your files through a biller or clearinghouse, please confirm that they are aware of the EDI Transition project and have received updated notifications.

The current targeted implementation date for the EDI transition is the end of 2016. The implementation date may be subject to change based on the functionality and stability of the EDI system as a whole.

Please keep in mind testing is ONLY related to EDI vendor transition. No behavioral health redesign components, including the new procedure coding, are available for testing at this time. Detailed information regarding EDI testing related to behavioral health redesign will be provided closer to the July 1, 2017 implementation date.

Questions can be sent to DAS-EDI-Support@das.ohio.gov. Updates and additional resources for trading partners can be accessed on the ODM Trading Partners page: <http://medicaid.ohio.gov/PROVIDERS/Billing/TradingPartners.aspx>.
