Number of injuries requiring emergency/unplanned medical intervention.						
Number of injuries requiring hospitalization.						

You are finished. Instructions for returning report are no Page 1. Thank you.

Six Month Reportable Incident Data Report Form Inpatient Psychiatric Service Provider

Definitions. Please utilize the following definitions for completing this report:

"Emergency/Unplanned Medical Intervention" means treatment required to be performed by a licensed medical doctor, osteopath, podiatrist, dentist, physician's assistant, or certified nurse practitioner, but the treatment required is not serious enough to warrant or require transfer to a hospital medical unit. It includes sutures, staples, immobilization devices and other treatments not listed under "First Aid", regardless of whether the treatment is provided in the hospital, or at a doctor's office/clinic/hospital ER, etc. This does not include routine medical care or shots/immunizations, as well as diagnostic tests, such as laboratory work, x-rays, scans, etc., if no medical treatment is provided.

"First Aid" means treatment for an injury such as cleaning of an abrasion/wound with or without the application of a Band-aid, application of a butterfly bandages/Steri-Strips™, application of an ice/heat pack for a bruise, application of a finger guard, non-rigid support such as a soft wrap or elastic bandage, drilling a nail or draining a blister, removal of a splinter, removal of a foreign body from the eye using only irrigation or swab, massage, drinking fluids for relief of heat stress, eye patch, and use of over-the-counter medications such as antibiotic creams, aspirin and acetaminophen. These treatments are considered first aid, even if applied by a physician. These treatments are not considered first aid if provided at the request of the patient and/or to provide comfort without a corresponding injury.

"Hospitalization" means inpatient treatment provided at a medical acute care hospital, regardless of the length of stay. Hospitalization does not include treatment when the individual is treated in and triaged through the emergency room with a discharge disposition to return to the community or psychiatric inpatient unit.

"Illness/Medical Emergency" means a sudden, serious and/or abnormal medical condition of the body experienced by a patient that requires immediate and/or unplanned admission to a hospital medical unit for treatment, and which happens on the grounds of the hospital or during the provision of care or treatment, including during hospital off-grounds events. A medical illness/emergency does not include injury.

"Injury" means an event requiring medical treatment that is not caused by a physical illness or medical emergency. It does not include scrapes, cuts or bruises which do not require medical treatment.

"Mechanical Restraint" means a staff intervention that involves any method of restricting a patient's freedom of movement, physical activity, or normal use of his or her body, using an appliance or device manufactured for this purpose.

"Physical Restraint", also known as "manual restraint", means a staff intervention that involves any method of physically (also known as manually) restricting a patient's freedom of movement, physical activity, or normal use of his or her body without the use of mechanical restraint devices.

"Seclusion" means a staff intervention that involves the involuntary confinement of a patient alone in a room where the patient is physically prevented from leaving.

"Transitional Hold" means staff intervention that involves a brief physical (also known as manual) restraint of a patient face-down for the purpose of quickly and effectively gaining physical control of that patient, or prior to transport to enable the patient to be transported safely.
