 0.1% - 200.0%

 200.1% - 1,803.0%

## Map Information:

This map represents the change in naloxone administration rates from 2013 to 2014. On average, naloxone administrations increased from 10.5 to 13.9 per 10,000 persons (32.4%) during this time. Counties experiencing the largest increase in administration rates are highlighted in red; however, these numbers represent extreme increases and must be interpreted with caution. For example, the large increase in Washington County was the result of a change in small numbers. The large increase statewide may be interpreted in part as the result of a change in rule as of October 2013 that allowed basic and intermediate level EMTs to dispense naloxone.

Note: Alcohol, Drug Addiction and Mental Health Services (ADAMHS) Boards have black borders, and counties have white borders. Borders are black in cases where ADAMHS boards and counties have the same borders.
