- So What?
Research Questions

- Does consumer perception of the service providers’ cultural sensitivity have any association with
  - Hospital Use
  - Social Connectedness (Presence of a Community Support Network)

Why is Cultural Perspective Important?

Culture falls under the umbrella of person-centered care. It provides a framework for understanding human experience.

- Personal & Group Identity
- Beliefs & Values
- Customs & Traditions
- Language & History
- Otherness: Minority versus Majority Status
DSM IV-TR Guidelines

- Inquire about cultural identity — race, ethnicity, gender, sexual orientation, religion, spirituality, disability status & other self-defining characteristics
- Explore cultural explanations of the problem
- Consider cultural factors in psychosocial environment and level of functioning
- Examine cultural elements in the client-provider relationship
- Overall cultural assessment goes into diagnosis and individual treatment plan

The Knowledge Base

Very little research

- looks at the relationship between provider’s cultural sensitivity & the patient’s social support (Griner & Smith, 2006)
- evaluates cultural sensitivity from the consumer perspective (Cornelius et al, 2004)
MHSIP Adult Consumer Survey

Self-rated

- Perception of Care
  - General Satisfaction (3 items)
  - Access to Care (4 items)
  - Quality & Appropriateness (8 items)
  - Participation in Treatment (2 items)
- Quality of Life (8 items)
- Functioning (5 items)
- Social Connectedness (4 items)

Ohio Department of Mental Health and Addiction Services

Consumer Based
Cultural Competence Inventory (CBCCI)

Experimental 52-item Inventory developed by L.J. Cornelius & others in Maryland in 2002.

- Awareness of patient culture
- Respectful behaviors
- Language interpreters
- Understanding indigenous practices
- Consumer involvement
- Acceptance of cultural differences
- Community outreach
- Patient-provider-organization interactions

Ohio Department of Mental Health and Addiction Services
For Study Purposes: The Independent Variable

- 20 items from CBCCI tested & analyzed by OMHAS-PQR staff in 2012 Ohio administration
  Reduced administrative burden
  Conceptual & statistical considerations

- 10 items from CBCC survey adopted to analyze consumer-reported treatment outcomes
  Factor loadings > .4
  Two factor solution explains 59.4% $s^2$
  Staff level (8 items)
  Organizational level (2 items)
  Cronbach’s $\alpha = .91$

Ohio Department of Mental Health and Addiction Services
CBCC Survey Leading Question

Some people belong to minority groups because their race, country of origin, history, language, religion, or sexual orientation is different than most people. Do you consider yourself a cultural, racial, ethnic, religious, or sexual minority group member?

☐ Yes ☐ No

If you answered YES, what is your minority group? (Specify cultural, racial, ethnic, religious and/or sexual identity)______________________

Ohio Department of Mental Health and Addiction Services

Minority Status

About 37% of the sample who were people of color or hispanic ethnicity said No to the question about minority status.

- The US is becoming more racially and ethnically diverse.
- Many people in the sample do not appear to see themselves as “other” or set apart from mainstream society because of race or ethnicity.
- However, respondents had many ways of identifying themselves as individuals

Ohio Department of Mental Health and Addiction Services
Respondents

373 CBCC surveys returned
- 311 African American respondents (85%)

- F = 61%    M = 39%
- 46.9 X Age
  Range 18 – 79
  SD = 11.3
- 91% Medicaid
  9% other public coverage
- 89.5% long term
  10.6% new in 2011
- 88% still in treatment
  5% terminated
  7% unknown status

Dependent Variable 1: Hospitalization

- Community Medicaid & State Hospitalization
  ◦ Within 24-month period (7/1/09 – 6/30/11)
- Provider at time of Hospitalization matched provider at time of survey (March 2012)
  ◦ Eliminated 5 cases
- 30 cases coded as Hospitalized = 1 (Yes)
  ◦ 12 cases FY10, 18 cases FY11
- 285 cases coded as Hospitalized = 0 (No)

6 Independent Variables entered into Logistic Regression

- Age
- Gender
- Geographic Representation
- Diagnostic Group
- Service Longevity

Cultural Competence Scale

Mean = 3.81
Sd = .711
N = 311
Logistic Regression

A statistical test that determines whether a low mean score on a scale like the CBCC has an association with hospital use...

Logistic Regression Model (N = 311)

Simply Speaking

The probability the consumer stayed out of the hospital and remained in the community increased with every 1 point increase in CBCC scale.

Client-Reported Outcomes

Dependent Variable 2: Social Connectedness Score

As a direct result of the Outpatient services I received:

<table>
<thead>
<tr>
<th>Domain</th>
<th>Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>Social Connectedness</td>
<td>I am happy with the friendships I have</td>
</tr>
<tr>
<td></td>
<td>I have people with whom I can do enjoyable things</td>
</tr>
<tr>
<td></td>
<td>I feel I belong in community</td>
</tr>
<tr>
<td></td>
<td>In a crisis, I would have the support I need from family or friends</td>
</tr>
</tbody>
</table>
13 Independent Variables entered into Regression Model

- Age
- Race
- Gender
- Ethnicity
- Geographic Profile
- Diagnosis
- Service Longevity
- Service Continuity

- Perception of Care
  - General Satisfaction
  - Access
  - Quality & Appropriateness
  - Participation in Treatment

- Cultural Sensitivity

</tbody>
</table>

R² = .325, F = 7.7318,287, p < .000

In other words

For every 1 point increase in the consumer's perception of the provider's cultural sensitivity, there was a 42.7% increase in the strength of the consumer's self-reported social support network.
By Comparison

For every 1 point increase in the consumer’s perception of the provider’s cultural sensitivity, there was a
- 18.7% increase on Quality of Life
- 18.3% increase on Functioning

Implications

✓ The perception of culturally sensitive care appears to help the client improve social connections in his or her community.

However, no association was found between social connectedness and probability of hospitalization.

✓ Therefore, there is something about the perceived cultural sensitivity of the provider that associates with client hospitalization and predicts the client’s social connectedness as a treatment outcome.
What Else?

- Taken together…
  - Changing sense of one’s minority ("less than") status
  - Recognition of difference important aspect of provider cultural sensitivity
  - CS associated with probability of staying in community and out of hospital
  - CS predicts strengthened social support
- What types of culturally sensitive service interventions are likely to promote or support these findings?
